SUMMARY

Product Manager with 5+ years in software — 3.5 years building and scaling B2B SaaS platform products and 2 years in software engineering (engineer turned PM). At 6sense, I own the technographics and market insights domain: shipped signals from 0→1 driving **\$100K ARR**, improved retention by **18%** through data-backed decisions, and built automated workflows that reduced manual operations effort by **98%**. Skilled in market research, product development, analytics, and Agile methodologies.

EXPERIENCE

[6sense Insights](#)

Bangalore

Product Manager (BA → PM)

Jul 2024 – Present

- Built AI-assisted threshold workflow automating classification decisions for the Data Ops team — reduced manual effort by **98%**, enabling signal processing to scale without adding headcount.
- Rebuilt technographic job-level classification with the data science team using ML models; improved signal accuracy by **85%+** and restored user trust in core search and discovery experiences.
- Launched market insight signals from 0→1 — **30+** enterprise customers, **\$100K ARR**; owned full lifecycle from customer discovery through data pipeline design to production.
- Ran **25+** customer interviews to map onboarding and discovery drop-offs; shipped prioritised fixes that drove an **18%** lift in retention.
- Built historical jobs framework improving technographic data freshness and coverage by **72%**, reducing signal staleness and lifting CSAT by **20%**.
- Integrated external data sources across product areas, expanding technographic signal coverage by **32%** and improving reliability of enterprise-facing experiences.
- Mapped early churn triggers (**D30/D60/D90**) with analytics; shipped targeted in-product journeys that closed drop-off gaps and improved early engagement.
- Collaborated with sales and CS to gather enterprise feedback on signal accuracy; translated findings into a data quality backlog that reduced customer-reported data issues by **40%**.
- Revamped SI App information architecture using customer-driven research; improved feature discoverability by **30%** across high-density technographic data views.

Business Analyst (Product Management Team)

Jul 2022 – Jun 2024

- Launched internal CMS for technographics data — gave ops direct control over signal quality, reduced visible error rate by **98%**, and cut escalation tickets by **60%**.
- Benchmarked technographic data assets against competing platforms on coverage, accuracy, and freshness; gaps identified shaped 3 major roadmap priorities.
- Analysed data accuracy to reduce technographic and psychographic churn by **27%**; iterated on product based on user feedback, cutting bounce rate by **18%**.

[Accenture](#)

Pune

Software Engineer

Jul 2020 – Jun 2022

- Built and maintained backend services and APIs for AT&T's high-traffic consumer web platform (phones & devices); improved system stability and reduced production incidents.
- Collaborated with QA and product teams to debug, ship fixes, and support feature releases; reduced post-release defects through root cause analysis.

EDUCATION & CERTIFICATIONS

KIIT University — B.Tech, Information Technology

2016 – 2020 | Internships: Reliance Jio, HighRadius

GrowthX — Advanced growth strategy: acquisition, onboarding, retention, product-led growth, data-led decision-making, tech-led growth.

SKILLS

Product & Strategy: 0→1 Development, Roadmapping, Product Discovery, Go-To-Market, Market Research, Competitive Analysis

Data & AI: SQL, Funnel & Cohort Analysis, A/B Testing, ML Signal Products, Workflow Automation, Data Quality & Reliability

Retention: Onboarding Design, Engagement Analysis, Retention Diagnosis, Churn Modelling, Root Cause Analysis, Customer Research

Execution: Agile/Scrum, Cross-functional Collaboration, Prioritisation Frameworks, Sprint Planning, Requirements Writing
